

WETLAND SERVICES

Striking a Balance

GTS has been providing wetland services to a wide range of clients for more than 30 years. We use the substantial body of knowledge we've accumulated during that time to help our clients maintain the careful balance needed to fuel economic development while preserving vital natural resources. The results we've achieved have been truly amazing. Through thoughtful stewardship, we have been able to identify, maintain—and, in many cases, further enhance—wetlands while achieving our clients' goals for growth.

GTS realizes that wetlands are extremely complex ecosystems. To provide clients with comprehensive wetland services, we've assembled The GTS Wetland Team, a multidisciplinary team of professionals who are experienced with inland and tidal wetlands throughout the Mid-Atlantic region. Our professionals are experienced in defining wetland needs and providing well thought-out and practical solutions. Our teams use the latest in hand-held GPS technology tied to a GIS database. Two wetland teams are immediately available from our Wellsboro office.

Wetland Services

- Wetland Identification and Delineation
- USACE '87 Manual Regional Supplements
- Wetland Surveying—Conventional and GPS
- Wetland Permitting
 - Section 404
 - Section 10
 - Section 401 Water Quality Certification
 - Floodplain Encroachment
- Wetland Functional Assessment
- Wetland Avoidance and Minimization Analysis
- Wetland Mitigation and Restoration Design
- Wetland Construction Inspection
- Wetland Post-Construction Monitoring

Little Roaring Creek Wetland Replacement – GTS performed wetland replacement, permitting, natural stream channel relocation design, and construction consultation. We also provided data on soils, hydrology, and existing vegetation.

Muddy Creek Wetland Identification and Delineation – GTS's services included wetland identification, delineation, and mitigation design;; GIS; and public involvement. GTS prepared the CEE, Environmental Assessment (EA) Form, and the Section 4(f) evaluation.

Center Street Wetland Replacement – GTS's services for this large wetland complex included wetland identification, delineation, and replacement, as well as construction consultation and monitoring, stormwater management, noise analysis, and public involvement.
